

# Industrial Safety Update:

## Fit Testing Standards

As with many aspects of industrial safety, the need for accurate respirator fit testing has increased with the growing number of workers needed in the field.

Traditionally, qualitative test methods have been used to determine proper matching of equipment to employees.

CANSAFE Inc. in alliance with Levitt Safety Ltd. are pleased to introduce the PORTACOUNT Plus respirator Fit Tester, a state of the art instrument capable of testing a variety of respirator types. Because this an electronic device, the guesswork found in other testing methods is eliminated.

Please accept our invitation to visit us at the CANSAFE facility on April 17 and 18 2006 to learn more about this new system. We hope the PORTACOUNT fit tester can be your solution!
